

## Petition for the Implementation of a Community Composting Collection Program

We, citizens concerned about waste management and the environment, call on local authorities to act to reduce the incineration of organic waste by establishing a community composting program.

### Why Act?

1. **Reduction of Incinerated Waste:** A significant portion of household waste consists of organic materials, which could be repurposed rather than burned. Incineration generates harmful emissions and contributes to climate change.
2. **Valorization of Organic Materials:** Composting transforms food and green waste into a natural and rich amendment, beneficial for agriculture and urban gardens.
3. **Reduction of Carbon Footprint:** Local composting reduces the need for waste transportation and associated CO2 emissions.
4. **Strengthening Community Solidarity:** A community composting program fosters neighborly interactions and raises awareness of environmental issues.

### Our Requests:

- **The creation of a municipal program** for organic waste collection with accessible drop-off points for everyone.
- **The installation of community composters** in neighborhoods, with monitoring to ensure proper management.
- **The implementation of awareness campaigns** and training to encourage residents to participate and learn the basics of composting.
- **Support for existing local initiatives**, such as associations or collectives, to expand their impact.

By signing this petition, we urge our municipality to take concrete measures to reduce waste destined for incineration and promote a sustainable and eco-friendly solution.
